

Schedule More Appointments 24/7/365

Make scheduling easy with an AI-enabled automation tool that integrates with your website. Designed for field service industries including home services, lawn care, pest control, plumbing and HVAC. ServiceBot converts your leads into paying customers through real-time online scheduling.

How It Works

ServiceBot integrates with your company's website and drives web leads to paid customers through real-time online scheduling. Your customers interact with a bot which guides them through the entire scheduling experience.

Smart Scheduling

Schedule customers 24/7! Integrated with ServMan's ERP software, our online Smart Scheduling streamlines the booking process, helping you save time and labor. Your ServiceBot will ask all the right questions to seamlessly schedule new appointments based on your business's real-time availability.

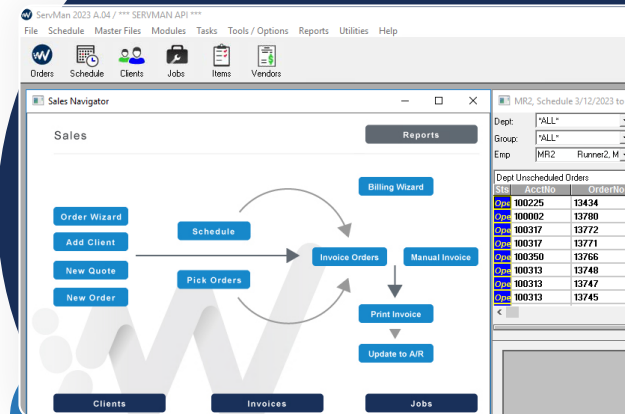

Create Accounts All the Time

ServiceBot helps you capture leads and create accounts that you might otherwise lose. Customers get the instant satisfaction of scheduling an appointment right away, without waiting to speak with someone in the office.

Integrates With Your Software

ServiceBot currently integrates with ServMan by WorkWave. When a lead engages with your ServiceBot, all of the information they share is captured and funneled into your CRM for your future use. No manual input necessary.

Key Features:

- ✓ Completely branded to your business – your customers will see you, not ServiceBot on your website
- ✓ Optimized for mobile users
- ✓ Acts as additional sales channel expanding the client's footprint
- ✓ New accounts and orders seamlessly get created inside of ServMan notifications
 - These orders get assigned to the right technicians with automated email notifications
- ✓ ServiceBot will send emails to the client for missed leads

Here's What You Can Expect:

- 1 Smart Scheduling
- 2 Book More Jobs
- 3 Integration with ServMan
