# WORKWAVE® PestPac

Mobile Software for Integrated Pest Management (IPM)

A single repository housing all inspection details provides easier, accurate and consistent inspection reporting that hold your company and customers accountable for their integrated pest management plan. Your technicians can save valuable record keeping time by viewing order details, inspecting all areas, scanning devices, tracking pest activity and documenting all actions right from their mobile device. Most importantly, the software provides reports identifying the pesticides and other materials used to ensure alignment with your customers integrated pest management goals.

With IPM
YOUR TECHNICIANS CAN:

- Create areas, subareas, and associate devices with each area

- Record materials used in areas including material application, application info, application details, and weather conditions

- Record pest findings, including captured, sighted and evidence found

- Add conditions on areas based on pre-populated options

- View and print summaries of applied materials and open conditions

- Easily attach photos, videos, voice notes, and files

- Use scanning devices* to easily track and record pest activity
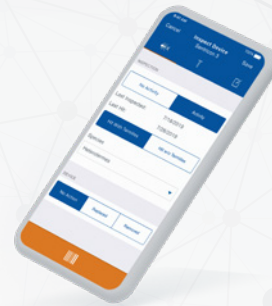

*Camera, Socket Scanner, and Cognex Scanner
