

ServMan Mobile 2.0

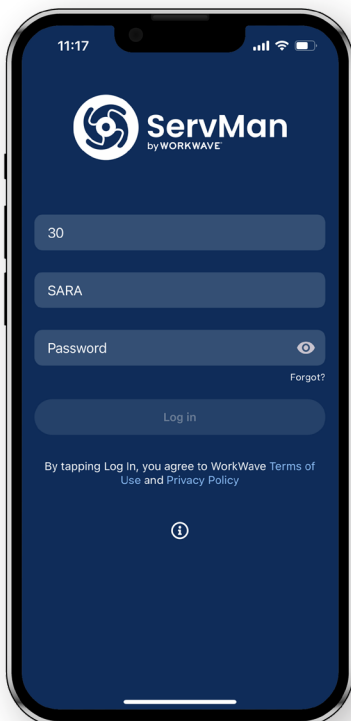

There's no overstating the importance of mobile functionality when your business revolves around technicians doing work in the field. By putting the power of ServMan in the palm of your hand, ServMan Mobile provides the control you need to operate effectively from anywhere.

The ServMan by WorkWave team has gone to great lengths updating the mobile app with added functionality and a more modern user experience that brings your team the same degree of flexibility they've come to expect from the ServMan core ERP solution.

FEATURES INCLUDE

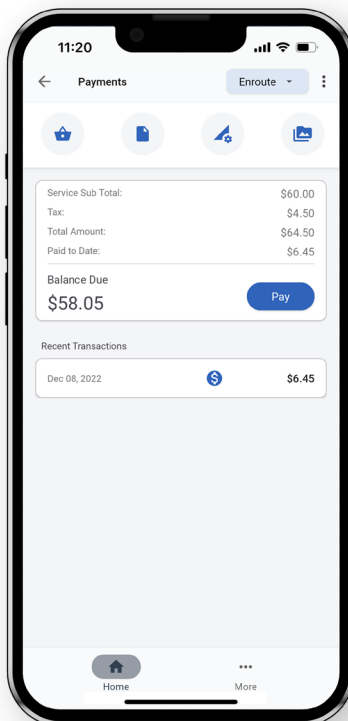

BROADER COMPATIBILITY

ServMan Mobile 2.0 is fully compatible with both iOS and Android devices.

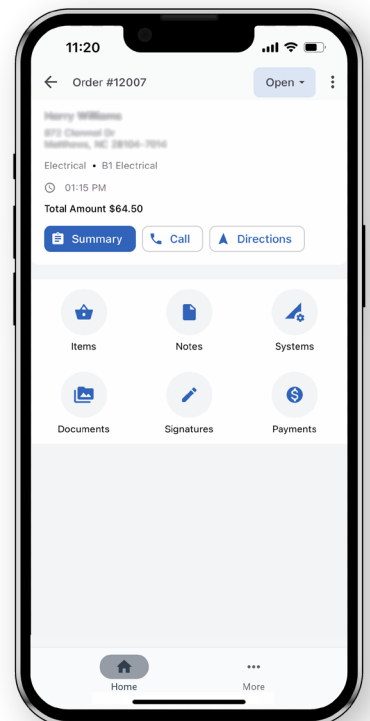

AN UPDATED INTERFACE

Put your best foot forward and engage customers in the field with a user-friendly application.

ACCESS TO KEY INFORMATION

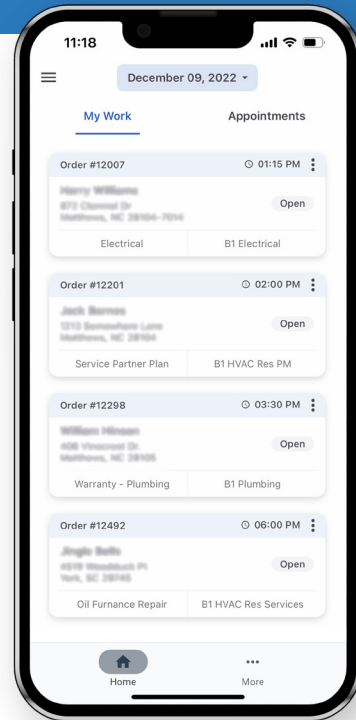

Technicians can access key information like customer details, service history and work orders in the field, minimizing calls to the office.

INTEGRATED WORKFLOWS

Common key tasks in the field are simplified and automated, including:

- Receiving, completing or creating work orders
- Providing quotes to clients in the field
- Adding time and material tracking to orders
- Attaching images to completed orders for proof of service
- Capturing client signatures
- Processing credit card payments
- Emailing required documents, such as invoices and proof of work, in the field
- Scanning barcodes for inventory tracking in real-time (coming soon)

REAL-TIME SYNCHRONIZATION

With real-time information, all users stay informed of changes whether from the back office or from the field.

When your techs are out in the field with no connectivity, the new Mobile 2.0 application will maintain their ability to function offline.
