

RouteManager

by WORKWAVE

Simulations is a RouteManager product specifically designed for testing and exploring various route configurations and scenarios. It allows you to conduct these tests without impacting your live operations. You can effortlessly generate a visual representation of your fleet activities and experiment with up to 100 scenarios to pinpoint those that offer the lowest costs and the highest operational efficiency.

Why Simulations?

Test any routing scenario without needing to make decisions at that moment.

- **Evaluate Job Bids.** Is this job too far from my depot? Will it affect other areas of my business negatively or positively?
- **Utilize Resources Effectively.** Do I need to add another truck if I add this service area?
- **Maximize Capacities.** Can I handle more volume with my current fleet?
- **Test Various Scenarios.** How can I build my routes in a safe environment and test different “what if” scenarios without impacting live operations?
- **Save Repeat Routes.** How can I easily save routes that are needed regularly?

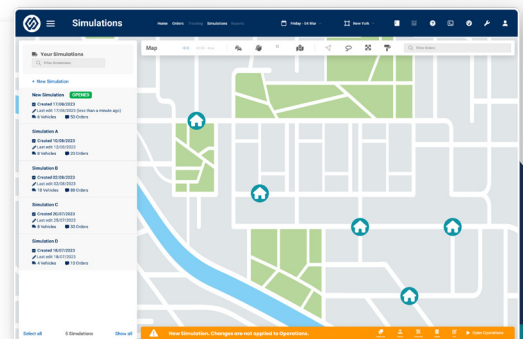

“Simulations is extremely helpful for working bids of all different sizes. Its user friendly platform makes it easy to make changes and reroutes, and it allows our team to work on multiple projects simultaneously.”

– Janine Picchiello, Last Mile

How Simulations Works

Simulations let you plan routes like regular operations but without dispatching them. The real benefit emerges when you adjust factors like working hours, vehicle costs, speeds, and locations. If you're happy with the simulation, you can easily transfer the route to operations with a few clicks.

If you think your business could benefit from a simulation environment, contact us today at (866) 497-4993 or email WWRMSales@workwave.com.
