

## Inventory & Asset Management

Automating inventory tracking processes is crucial for any enterprise field service business to ensure efficiency and minimize wasted time and resources. ServMan by WorkWave provides inventory and asset tracking software that helps ERP businesses automate their inventory tracking processes. It provides real-time inventory level tracking, automatic purchase order generation and reporting capabilities. ServMan also allows you to track more asset details than other software.

**Here are some of the benefits of using ServMan for inventory and asset tracking:**

### **Real-time inventory level tracking**

ServMan's real-time inventory level tracking eliminates the confusion and miscommunications that occur when waiting for information to sync across locations or devices. This ensures that your whole team is always up to date on inventory levels, so you never run out of the things you need.

### **Automatic purchase order generation**

ServMan can automatically generate purchase orders when inventory levels are low. This helps you avoid potential shortages before they happen.

### **Reporting**

ServMan provides a variety of reports that you can use to track your inventory and assets. This information can help you make informed decisions about your inventory management and asset usage.

### **Detailed tracking**

ServMan allows you to track more asset information such as serial number, location and maintenance history.

If you are looking for inventory and asset tracking software that can help you streamline your enterprise, ServMan by WorkWave is a great option. It is a powerful software with a variety of features that can help you improve your inventory management and asset usage.
